

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Epilepsy Society Annual Meeting (AES) 2023

Meeting period: December 2023 | Author: Yuki Tanabe

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Josefina Dellacroix, MD (Sandhill Neuroscience Center)

A hallway conversation during the afternoon break. Monitoring intervals during titration are set by clinic routine here rather than by protocol. Mentioned a guideline update discussed at journal club but did not raise any specific finding.

Conversation — Thandiwe Barrowman, MD (Quarry Hill Epilepsy Center)

Stopped to talk on the way out of a session block, with no agenda on either side. Spent some time on the surgical workup list and how workup decisions get sequenced. Asked whether I had seen a case series someone forwarded; I had not, and offered nothing in return.

Conversation — Lukas Ravenscroft, MD (Fox Hollow Neurology Partners)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Asked about my travel schedule, since visits keep landing on the busiest clinic days. Spent some time on the older half of the panel and how workup decisions get sequenced.

Conversation — Rasmus Ashgrove, MD (Northgate Neurology Partners)

A hallway conversation during the afternoon break. Referenced a guideline update discussed at journal club in passing. The composition of newly referred patients has shifted over the last year or two.

Conversation — Priya Raghavan, MD (North Star Neurology)

A short exchange over the coffee queue. Titration habits came up in general terms; no specifics were discussed and none were offered. Referral patterns into this clinic have changed, and the older half of the panel is a bigger share than it was.

Conversation — Jaromir Cavanaugh, MD (Granite Bay Epilepsy Center)

Approached me rather than the other way around, which is worth noting. Spent some time on the surgical workup list and how workup decisions get sequenced. Monitoring intervals during titration are set by clinic routine here rather than by protocol. Onboarding the epilepsy fellow is the current preoccupation here.

Follow-ups have been logged in the interaction system.
