

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Academy of Neurology Annual Meeting (AAN) 2024

Meeting period: April 2024 | Author: Rachel Suh

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Fabian Galbraith, MD (Palmetto Neurology Institute)

A short exchange over the coffee queue. The travel schedule this year came up, and little else. Asked whether I had seen a review that circulated on the service; I had not, and offered nothing in return. Coverage paperwork varies by payer, which came up as a general frustration.

Conversation — Nikolai Merriwether, MD (Bayview Health Neurology)

Stopped to talk on the way out of a session block, with no agenda on either side. The appeals process takes longer than the clinical decision, which came up as a general frustration. Talked through the older half of the panel in general terms, without any specific case.

Conversation — Viraj Galbraith, MD (Quarry Hill Epilepsy Center)

We spoke standing near the exhibit aisles, briefly. Asked whether I would be at the meeting later this year. Left it at that, with the next visit to be scheduled.

Conversation — Saoirse Wetherby, MD (Willowmere Neuroscience Center)

A hallway conversation during the afternoon break. Referenced a review that circulated on the service in passing. Talked through the surgical workup list in general terms, without any specific case.

Conversation — Rosalind Jarreau, MD (Thornfield Regional Epilepsy Program)

A short exchange over the coffee queue. Left it at that, with a call later this month to be scheduled. Titration scheduling is handled by nursing staff, which the practice finds workable.

Conversation — Leonie Eversholt, MD (Silver Creek Medical Group)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Noted that benefit checks takes longer than the clinical decision and that this is not specific to any one product. No materials requested this time. Asked about safety and confirmed nothing to report.

Conversation — Wilhelmina Tavernier, MD (Lakeshore Neurological Care Center)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Asked whether I would be at the meeting later this year. Asked about my travel schedule, since visits keep landing on the busiest clinic days.

Conversation — Orla Oyelaran, MD (Palmetto Neurology Institute)

A hallway conversation during the afternoon break. Closed there — nothing actionable this visit. The composition of newly referred patients has shifted over the last year or two. Mentioned a session summary from a colleague but did not raise any specific finding.

Conversation — Lachlan Dunmore, MD (Sandhill Neuroscience Center)

Stopped to talk on the way out of a session block, with no agenda on either side. Compared notes on which sessions were worth the time. Monitoring intervals during titration are set by clinic routine here rather than by protocol. Mentioned a session summary from a colleague but did not raise any specific finding.

Follow-ups have been logged in the interaction system.
