

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Academy of Neurology Annual Meeting (AAN) 2022

Meeting period: April 2022 | Author: Yuki Tanabe

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Nikolai Zeitler, MD (Juniper Flats Neurology Partners)

We spoke standing near the exhibit aisles, briefly. Mostly small talk about the program and the venue. The composition of long-standing patients has shifted over the last year or two. The prior-authorization workflow is still being sorted out, and that took up the first part of the conversation.

Conversation — Adaeze Castellane, MD (Harborlight Epilepsy Center)

Introduced by a colleague from the same region and talked for a few minutes. No product discussion this time. Asked about safety and confirmed nothing to report. Titration scheduling is handled by nursing staff, which the practice finds workable. Talked through the pediatric-to-adult transfers in general terms, without any specific case.

Conversation — Lukas Stanhope, MD (Highmoor Health Neurology)

Approached me rather than the other way around, which is worth noting. Described how newly referred patients is triaged now compared with before. Described the practice as early in its experience here, with nothing to report yet. Referenced a guideline update discussed at journal club in passing.

Conversation — Xiomara Barrowman, MD (Beacon Hill Neurology Associates)

Approached me rather than the other way around, which is worth noting. The appeals process takes longer than the clinical decision, which came up as a general frustration. Talked through newly referred patients in general terms, without any specific case. Described how the refractory group is triaged now compared with before.

Conversation — Saoirse Stanhope, MD (Northbrook Neurology Institute)

A short exchange over the coffee queue. Described how the older half of the panel is triaged now compared with before. Described a preference for slower titration in general, unrelated to any particular patient.

Conversation — Ilse Beauchamp, MD (Harborlight Epilepsy Center)

A hallway conversation during the afternoon break. Most of the discussion was about the phone triage line, which went live without much warning. Referenced a session summary from a colleague in

passing.

Conversation — Felicity Fairweather, MD (Northgate Neurology Partners)

Stopped to talk on the way out of a session block, with no agenda on either side. Described the practice as early in its experience here, with nothing to report yet. Talked through long-standing patients in general terms, without any specific case.

Conversation — Rohan Harkness, MD (Riverstone Comprehensive Epilepsy Clinic)

A hallway conversation during the afternoon break. Onboarding the epilepsy fellow is the current preoccupation here. Mentioned a review that circulated on the service but did not raise any specific finding. Talked through the surgical workup list in general terms, without any specific case.

Follow-ups have been logged in the interaction system.
