

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Academy of Neurology Annual Meeting (AAN) 2023

Meeting period: April 2023 | Author: Ravi Chandrasek

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Gemma Lindenmuth, MD (Silver Creek Medical Group)

Approached me rather than the other way around, which is worth noting. Clinic throughput keeps slipping since the summer, which shapes how much time there is for anything else. Mentioned a session summary from a colleague but did not raise any specific finding.

Conversation — Camila Montclair, MD (Juniper Flats Neurology Partners)

A hallway conversation during the afternoon break. Titration scheduling is handled by nursing staff, which the practice finds workable. Referral patterns into this clinic have changed, and the older half of the panel is a bigger share than it was.

Conversation — Renata Cavanaugh, MD (Northbrook Neurology Institute)

The conversation happened while waiting for a session room to clear. Described how the older half of the panel is triaged now compared with before. The practice lost two medical assistants and has not backfilled, so the referral queue looks better than last year. Noted that coverage paperwork varies by payer and that this is not specific to any one product.

Conversation — Lukas Eastmond, MD (Thornfield Regional Epilepsy Program)

A short exchange over the coffee queue. Referenced a review that circulated on the service in passing. Monitoring intervals during titration are set by clinic routine here rather than by protocol.

Conversation — Eamon Hollingsworth, MD (Silver Creek Medical Group)

Introduced by a colleague from the same region and talked for a few minutes. Mentioned a guideline update discussed at journal club but did not raise any specific finding. Talked through the pediatric-to-adult transfers in general terms, without any specific case. Referral patterns into this clinic have changed, and long-standing patients is a bigger share than it was.

Conversation — Zubin Thackeray, MD (Cedar Ridge Regional Epilepsy Program)

Introduced by a colleague from the same region and talked for a few minutes. The composition of the pediatric-to-adult transfers has shifted over the last year or two. Noted that the appeals process varies by payer and that this is not specific to any one product.

Conversation — Pallavi Vasquez-Lund, MD (Northbrook Neurology Institute)

We spoke standing near the exhibit aisles, briefly. Compared notes on which sessions were worth the time. Left it at that, with the next visit to be scheduled. Talked through the older half of the panel in general terms, without any specific case.

Follow-ups have been logged in the interaction system.
