

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Epilepsy Society Annual Meeting (AES) 2024

Meeting period: December 2024 | Author: Ravi Chandrasek

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Silvio Inverness, MD (Alder Point Neurology Associates)

Introduced by a colleague from the same region and talked for a few minutes. The travel schedule this year came up, and little else. Described a preference for slower titration in general, unrelated to any particular patient.

Conversation — Susan Ratliff, MD (Harborlight Neurology)

Stopped to talk on the way out of a session block, with no agenda on either side. Mentioned a session summary from a colleague but did not raise any specific finding. Described how the pediatric-to-adult transfers is triaged now compared with before.

Conversation — Gaspar Ostrander, MD (Riverstone Comprehensive Epilepsy Clinic)

A hallway conversation during the afternoon break. Described a preference for slower titration in general, unrelated to any particular patient. Asked whether I had seen a case series someone forwarded; I had not, and offered nothing in return.

Conversation — Yesenia Vasquez-Lund, MD (Northgate Neurology Partners)

Stopped to talk on the way out of a session block, with no agenda on either side. Asked whether I would be at the meeting later this year. Referenced a guideline update discussed at journal club in passing.

Conversation — Xiomara Barrowman, MD (Beacon Hill Neurology Associates)

The conversation happened while waiting for a session room to clear. Described a preference for slower titration in general, unrelated to any particular patient. Closed there — no materials requested. The composition of the older half of the panel has shifted over the last year or two.

Conversation — Ulrike Silverthorne, MD (Silver Creek Medical Group)

A hallway conversation during the afternoon break. The composition of the refractory group has shifted over the last year or two. Monitoring intervals during titration are set by clinic routine here rather than by protocol. Compared notes on which sessions were worth the time.

Conversation — Valentina Lindenmuth, MD (Palmetto Neurology Institute)

Stopped to talk on the way out of a session block, with no agenda on either side. Asked whether I had seen a guideline update discussed at journal club; I had not, and offered nothing in return. Closed there — no product discussion. Monitoring intervals during titration are set by clinic routine here rather than by protocol.

Conversation — Kenji Eversholt, MD (Copperfield Neurology Institute)

A hallway conversation during the afternoon break. Described how the pediatric-to-adult transfers is triaged now compared with before. Benefit verification is the step that most often delays a start here. Referral patterns into this clinic have changed, and newly referred patients is a bigger share than it was.

Conversation — Ilse Beauchamp, MD (Harborlight Epilepsy Center)

A short exchange over the coffee queue. Asked whether I had seen a review that circulated on the service; I had not, and offered nothing in return. The composition of newly referred patients has shifted over the last year or two.

Conversation — Anjali Steinmetz, MD (Ember Lake Medical Group)

Stopped to talk on the way out of a session block, with no agenda on either side. Left it at that, with a follow-up appointment to be scheduled. Mostly small talk about the program and the venue.

Conversation — Camila Montclair, MD (Juniper Flats Neurology Partners)

Approached me rather than the other way around, which is worth noting. Formulary questions has improved somewhat, which came up as a general frustration. Talked through long-standing patients in general terms, without any specific case. Compared notes on which sessions were worth the time.

Follow-ups have been logged in the interaction system.
