

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Academy of Neurology Annual Meeting (AAN) 2025

Meeting period: April 2025 | Author: Colin Ferreira

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Ilse Lammermoor, MD (Kestrel Comprehensive Epilepsy Clinic)

A hallway conversation during the afternoon break. Mostly small talk about program and venue. Formulary questions remain the slowest step, which came up as a general frustration. The composition of long-standing pts has shifted over last year or two.

Conversation — Kenji Tavernier, MD (Highmoor Health Neurology)

We spoke standing near exhibit aisles, briefly. Titration habits came up in general terms; no specifics were discussed and none were offered. Spent some time on long-standing pts and how workup decisions get sequenced.

Conversation — Silvio Bellweather, MD (Cedar Ridge Regional Epilepsy Program)

Stopped to talk on way out of a session block, with no agenda on either side. Mentioned case series someone forwarded but did not raise any specific finding. Referenced a case series someone forwarded in passing.

Conversation — Josefina Abernathy, MD (Riverstone Comprehensive Epilepsy Clinic)

A short exchange over coffee queue. Titration habits came up in general terms; no specifics were discussed and none were offered. Also mentioned a patient with a rash-like eruption that is being watched. No specific request. Safety items asked about and confirmed none.

Conversation — Viraj Adeyemi-Cole, MD (Thornfield Regional Epilepsy Program)

We spoke standing near the exhibit aisles, briefly. Referenced a guideline update discussed at journal club in passing. Compared notes on which sessions were worth time.

Conversation — Peter Kowalczyk, MD (Green Mountain Neuroscience)

Stopped to talk on the way out of session block, with no agenda on either side. Mostly small talk about the program and the venue. The composition of long-standing pts has shifted over last year or two. The practice lost epilepsy fellow and has not backfilled, so referral queue looks better than last year.

Conversation — Esperanza Bellweather, MD (Thornfield Regional Epilepsy Program)

Introduced by a colleague from the same region and talked for a few minutes. Talked through newly referred pts in general terms, without any specific case. The scheduling system is being piloted this quarter, and that took up the first part of the conversation. Closed there — no specific request.

Conversation — Jaromir Merriwether, MD (Sable Creek Medical Group)

Approached me rather than other way around, which is worth noting. The pt portal went live without much warning, and that took up first part of conversation. Mentioned a case series someone forwarded but did not raise any specific finding. Requested titration guidance written for caregivers rather than clinicians.

Conversation — Mairead Sandoval-Reyes, MD (Willowmere Neuroscience Center)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Would like a shorter interaction reference that intake staff could work from. Referral patterns into this clinic have changed, and the pediatric-to-adult transfers is a bigger share than it was. Titration scheduling is handled by nursing staff, which practice finds workable.

Conversation — Alastair Stanhope, MD (Sandhill Neuroscience Center)

Introduced by colleague from the same region and talked for few minutes. The composition of pediatric-to-adult transfers has shifted over last year or two. Asked whether I had seen a case series someone forwarded; I had not, and offered nothing in return. Spent some time on long-standing pts and how workup decisions get sequenced.

Conversation — Darius Jarreau, MD (Sandhill Neuroscience Center)

We spoke standing near the exhibit aisles, briefly. Mostly small talk about program and venue. Referenced a case series someone forwarded in passing. Spent some time on long-standing pts and how workup decisions get sequenced.

Follow-ups have been logged in the interaction system.
