

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Academy of Neurology Annual Meeting (AAN) 2021

Meeting period: April 2021 | Author: Priya Menon

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Adaeze Vasquez-Lund, MD (Alder Point Neurology Associates)

Introduced by a colleague from the same region and talked for a few minutes. Titration habits came up in general terms; no specifics were discussed and none were offered. Referral patterns into this clinic have changed, and the older half of the panel is a bigger share than it was.

Conversation — Nadine Sandoval-Reyes, MD (Windrow Neuroscience Center)

Stopped to talk on the way out of a session block, with no agenda on either side. Asked whether I had seen a case series someone forwarded; I had not, and offered nothing in return. Formulary placement was the only product-adjacent topic, and only in general terms. Agreed to reconnect at the following quarter; nothing actionable this visit.

Conversation — Gemma Norrington, MD (Foxglove Health Neurology)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Referenced a case series someone forwarded in passing. This practice is still building familiarity with the product and had no clinical points to raise.

Conversation — Saoirse Inverness, MD (Granite Bay Epilepsy Center)

Stopped to talk on the way out of a session block, with no agenda on either side. Talked through the surgical workup list in general terms, without any specific case. No specific request this time. Asked about safety and confirmed nothing to report. Asked about my travel schedule, since visits keep landing on the busiest clinic days.

Conversation — Gaspar Oakhurst, MD (Cedar Ridge Regional Epilepsy Program)

A hallway conversation during the afternoon break. Benefit verification is the step that most often delays a start here. Mostly small talk about the program and the venue.

Conversation — Silvio Quintrell, MD (Ironwood Neurology Associates)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Noted that benefit checks take longer than the clinical decision and that this is not specific to any one product. Left it at that, with the next visit to be scheduled. Mentioned a session summary from a

colleague but did not raise any specific finding.

Conversation — Stephen Aldrich, MD (Cascade Summit Medical Center)

Introduced by a colleague from the same region and talked for a few minutes. Referral patterns into this clinic have changed, and the older half of the panel is a bigger share than it was. Mostly small talk about the program and the venue.

Conversation — Felicity Fairweather, MD (Northgate Neurology Partners)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Talked through newly referred patients in general terms, without any specific case. Asked whether I had seen a case series someone forwarded; I had not, and offered nothing in return.

Conversation — Lachlan Zeitler, MD (Bluestem Comprehensive Epilepsy Clinic)

Approached me rather than the other way around, which is worth noting. Nothing that needed follow-up this time. Asked about safety and confirmed nothing to report. Most of the discussion was about the new charting templates, which is being piloted this quarter.

Conversation — Lukas Tavernier, MD (Vantage Park Regional Epilepsy Program)

Approached me rather than the other way around, which is worth noting. Described how the pediatric-to-adult transfers is triaged now compared with before. Asked whether I had seen a guideline update discussed at journal club; I had not, and offered nothing in return.

Follow-ups have been logged in the interaction system.
