

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Neurological Association Annual Meeting (ANA) 2024

Meeting period: September 2024 | Author: Ravi Chandrasek

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Silvio Bellweather, MD (Cedar Ridge Regional Epilepsy Program)

Approached me rather than the other way around, which is worth noting. Agreed to reconnect at a follow-up appointment; no product discussion. Asked whether I had seen a guideline update discussed at journal club; I had not, and offered nothing in return.

Conversation — Ulrike Eversholt, MD (Thornfield Regional Epilepsy Program)

Approached me rather than the other way around, which is worth noting. The composition of long-standing patients has shifted over the last year or two. Mostly small talk about the program and the venue.

Conversation — Malika Kirkpatrick, MD (Bayview Health Neurology)

We spoke standing near the exhibit aisles, briefly. Left it at that, with a follow-up appointment to be scheduled. The composition of newly referred patients has shifted over the last year or two.

Conversation — Anouk Oakhurst, MD (Saltmarsh Neurological Care Center)

Approached me rather than the other way around, which is worth noting. Mentioned a guideline update discussed at journal club but did not raise any specific finding. The composition of the pediatric-to-adult transfers has shifted over the last year or two.

Conversation — Bastian Underhill, MD (Northgate Neurology Partners)

Caught between sessions in the poster hall; the conversation was short and entirely unprompted. Described how the pediatric-to-adult transfers is triaged now compared with before. Benefit verification is the step that most often delays a start here.

Conversation — Priya Raghavan, MD (North Star Neurology)

A hallway conversation during the afternoon break. Asked whether I had seen a case series someone forwarded; I had not, and offered nothing in return. Referral patterns into this clinic have changed, and the surgical workup list is a bigger share than it was. Described how the pediatric-to-adult transfers is triaged now compared with before.

Conversation — Esperanza Bellweather, MD (Thornfield Regional Epilepsy Program)

Approached me rather than the other way around, which is worth noting. Spent some time on newly referred patients and how workup decisions get sequenced. Formulary questions has improved somewhat, which came up as a general frustration. Asked whether I would be at the meeting later this year.

Conversation — Jaromir Grierson, MD (Saltmarsh Neurological Care Center)

A hallway conversation during the afternoon break. Noted that benefit checks takes longer than the clinical decision and that this is not specific to any one product. Asked whether I had seen a session summary from a colleague; I had not, and offered nothing in return.

Conversation — Imani Eastmond, MD (Granite Bay Epilepsy Center)

Approached me rather than the other way around, which is worth noting. Monitoring intervals during titration are set by clinic routine here rather than by protocol. The composition of long-standing patients has shifted over the last year or two.

Conversation — Arvind Calderwood, MD (Sandhill Neuroscience Center)

A hallway conversation during the afternoon break. Asked whether I had seen a review that circulated on the service; I had not, and offered nothing in return. The composition of newly referred patients has shifted over the last year or two. Described how the refractory group is triaged now compared with before.

Conversation — Quentin Kilbride, MD (Lakeshore Neurological Care Center)

Approached me rather than the other way around, which is worth noting. Asked about my travel schedule, since visits keep landing on the busiest clinic days. The composition of long-standing patients has shifted over the last year or two.

Follow-ups have been logged in the interaction system.
