

[SYNTHETIC SAMPLE] Fictional record generated for the DELPHi prototype demo. Names, institutions, and statements are invented; the layout imitates a generic field-medical format. Not a real document and not derived from any real record.

[CONFERENCE REFERENCE] The meeting named above is a real, publicly announced scientific congress and is used here only as the setting of this fictional record. No session content, abstract, poster, or presented data from that meeting is reproduced or paraphrased; every person and conversation below is invented.

Congress Attendance Report — American Epilepsy Society Annual Meeting (AES) 2022

Meeting period: December 2022 | Author: Marcus Obeng

Scope: unsolicited conversations held on-site. Session content and presented data are deliberately not reproduced here.

Conversation — Gaspar Kettleborn, MD (Fox Hollow Neurology Partners)

The convo happened while waiting for a session room to clear. Mentioned a review that circulated on the service but did not raise any specific finding. Asked whether I had seen a review that circulated on service; I had not, and offered nothing in return.

Conversation — Leonie Nakagawa, MD (Ironwood Neurology Associates)

A short exchange over coffee queue. Titration scheduling is handled by nursing staff, which practice finds workable. Formulary placement was the only product-adjacent topic, and only in general terms. Mentioned case series someone forwarded but did not raise any specific finding.

Conversation — Alice Nguyen-Barr, MD (Old Dominion Neurology Group)

We spoke standing near exhibit aisles, briefly. Titration scheduling is handled by nursing staff, which practice finds workable. Coverage paperwork varies by payer, which came up as a general frustration.

Conversation — Wilhelmina Eastmond, MD (Fox Hollow Neurology Partners)

A hallway convo during afternoon break. This practice is still building familiarity with product and had no clinical points to raise. Benefit verification is step that most often delays start here.

Conversation — Gemma Thistlewood, MD (Beacon Hill Neurology Associates)

Introduced by colleague from same region and talked for few minutes. Closed there — no specific request. Noted that coverage paperwork has improved somewhat and that this is not specific to any one product. Formulary placement was only product-adjacent topic, and only in general terms.

Conversation — Malika Danforth, MD (Riverstone Comprehensive Epilepsy Clinic)

Stopped to talk on the way out of a session block, with no agenda on either side. The practice lost epilepsy fellow and has not backfilled, so new-pt backlog has stretched out. Referenced review that circulated on the service in passing.

Conversation — Niamh Ostrander, MD (Bayview Health Neurology)

Introduced by a colleague from the same region and talked for a few minutes. Described a preference for slower titration in general, unrelated to any particular pt. Referral patterns into this clinic have changed, and newly referred pts is bigger share than it was. Referenced case series someone forwarded in passing.

Conversation — Darius Eastmond, MD (Kestrel Comprehensive Epilepsy Clinic)

The conversation happened while waiting for a session room to clear. Benefit verification is the step that most often delays start here. Described the practice as early in its experience here, with nothing to report yet.

Conversation — Eloise Underhill, MD (Northgate Neurology Partners)

Introduced by colleague from the same region and talked for few minutes. The composition of the refractory group has shifted over the last year or two. This practice is still building familiarity with product and had no clinical points to raise.

Conversation — Nikolai Barrowman, MD (Bluestem Comprehensive Epilepsy Clinic)

Approached me rather than the other way around, which is worth noting. Asked whether I would be at the meeting later this year. Titration scheduling is handled by nursing staff, which the practice finds workable. Asked whether I had seen a session summary from a colleague; I had not, and offered nothing in return.

Follow-ups have been logged in the interaction system.
